Message from Conference Chair

Dear Distinguished Scholars, Researchers, Academicians, and Participants,

It is my great honour and privilege to welcome you to the International Conference on Humanities and Global Dialogues, *Humanities Beyond Borders: Culture, Identity, and Global Dialogues*, organized by Academia Humanities Organization in collaboration with Ramotitânico (Braga, Portugal) on 27–28 June, 2026.

In an increasingly interconnected world, the humanities play a vital role in fostering intercultural understanding, preserving diverse identities, and promoting meaningful dialogue across geographical, linguistic, and cultural boundaries. This conference provides an international platform where scholars, educators, researchers, and practitioners can exchange innovative ideas, present cutting-edge research, and engage in thoughtful discussions that contribute to the advancement of humanities scholarship.

The theme, *Humanities Beyond Borders: Culture, Identity, and Global Dialogues*, reflects our shared commitment to exploring the complexities of human experience and addressing contemporary global challenges through interdisciplinary collaboration. We are delighted to bring together participants from different countries whose diverse perspectives enrich our academic community and inspire future research partnerships.

I extend my sincere appreciation to our keynote speakers, presenters, reviewers, organizing committee, and all participants whose dedication has made this conference possible. Your valuable contributions are the foundation of this scholarly gathering and its lasting impact.

I wish you a productive, inspiring, and memorable conference experience, and I look forward to the meaningful discussions and collaborations that will emerge from this event.

Dr. Rasib Mehmood
Conference Chair
International Conference on Humanities and Global Dialogues

A Glimpse of Keynote Speakers

Dr. Boyarkina Iren

Iren Boyarkina received her PhD from the University of Rome "Tor Vergata". She has done extensive research in English and American science fiction literature, English and American literature of the XIXth and XXth centuries, feminist literature, cognitive linguistics, Translation studies, etc. She published a monograph on English and Russian science fiction (2020) and works dedicated to Stapledon, Lessing, H.G. Wells, Arthur Clarke, Orwell, Mary Shelley, Anne Tyler, Henry James, Joyce, Dickens, Wharton, Bulgakov, Tolstoi, Yefremov, Belyaev, and Chekhov, among others. She also edited "Passages through Enclosures and the Spacetime Continuum in English and American Science Fiction"(2022) by Cambridge Scholars Publishing. She teaches English language and literature at the University of Tuscia and the University of Rome La Sapienza.

Dr. Boothenia Majool

Dr Bootheina Majoul is currently Associate Professor of English Literature at the High Institute of Languages of Tunis (ISLT), University of Carthage. She holds an MA in Cross Cultural Studies (ISLT, University of Carthage), PhD and HDR in English Literature (FLAHM, University of Manouba). She is a member of the National Sectoral Commission at the Tunisian Ministry of Higher Education and Scientific Research. She taught at eight different Tunisian institutions and has more than 26 years of teaching experience. Her areas of specialization are World Literature, English Literature, Maghreban Studies, Comparative Literature, Film Studies, Art History, Digital Pedagogy and Intercultural Communication. She is certified in digital pedagogy and serves as the coordinator of online teaching and UVT referent at ISLT. She has published 2 books and is the author of several academic articles and collections of poems. She is the Founder & Chair of *Arts & Humanities Global Network*, Vice-Chair of the international research network *Global Network of Liberal Arts*, Steering Committee Member of the international research network *Challenging Precarity Network*. Member of the Scientific Committee of the Research Laboratory *Language & Cultural Forms* (University of Carthage). She is an Executive Committee Member of *Doris Lessing Society*, and founder and Chair of *DLS North Africa Chapter*. She is part of the Research Group *TrAdE: Translation and Adaptation from/into English* (Tor Vergata University, Rome), and of the *International Society of Boredom Studies* (Madrid-International). She is a member of LEAD Academic Network.

Dr. Iman Al-Khalidi

Iman Al-Khalidi is a professor at the University of Technology and Applied Sciences, Sultanate of Oman. She has a seasonal work at the University of Toronto. She holds a Ph.D. in Teaching English to Speakers of other Languages from the University of Exeter, UK. She has an international experience in teaching English as a foreign/second language. She has several certificates in business English, teaching effectiveness, instructional design, and IELTS. She has participated in numerous research projects on course design, instructional design, and digital pedagogy. She has given several invited/plenary talks at international conferences.

Dr. Nailah Riaz

Dr. Nailah Riaz is a senior academic and research professional specializing in Literature and Film Studies, with a demonstrated record of scholarly impact. She holds an h-index of 8 in Web of Science, indicating consistent citation performance and engagement with international research communities. Her research engages with key contemporary debates in mediatization, spatial theory, and cultural studies, positioning her work within globally relevant humanities scholarship. Her publications contribute to interdisciplinary dialogues and reflect familiarity with evolving theoretical paradigms. Dr. Riaz's academic experience includes postgraduate supervision, research mentoring, and institutional leadership, equipping her with the expertise required for doctoral examination, thesis evaluation, and peer review at an international level. Her profile is compatible with international academic standards and comparable to expectations set by global higher education quality frameworks.

Dr. Huma Ahmad

Dr. Huma Ahmed is an Assistant Professor of English with over ten years of university teaching and research experience. She holds a PhD in English Literature, and her research interests include postcolonial literature, literary aesthetics, global humanities, comparative literature, and literary theory. Her scholarly work has been published in Q1 and Q2 international peer-reviewed journals, conference proceedings, and edited volumes. She is the author of the book chapter *Posthuman Textualities and Imagination*. She has published research on postcolonial literary studies in leading international journals. She has presented her research at numerous national and international conferences. She continues to engage in interdisciplinary scholarship on postcolonial aesthetics, cultural identity, global humanities, and contemporary literary discourse, with particular emphasis on intercultural dialogue, ethical engagement, and global citizenship.

Dr. Azadeh Mehrpouyan

Dr. Azadeh Mehrpouyan is a faculty member and one of the Top 10 Women Scientists in the Islamic World (2024), recognized as an Influential Woman in Iran's Scientific and Research Community (2023) and among Iran's Leading Researchers in 2025. Her work focuses on comparative literature, literature and technology, and ecocriticism within contemporary global and postcolonial contexts.

Dr. Inam Ullah

Dr. Inam Ullah has a PhD in Linguistics and Translation Studies from Lincoln University College, Malaysia. He did his Masters from National University of Modern Languages, Islamabad. He also holds a Bachelor of Education (B.Ed) from University of Peshawar along with *TESOL* Certification from Arizona State University, USA. Dr. Inam has an extensive experience of research and teaching at various levels. Currently, he is serving as a lecturer in English at the Department of English, Bacha Khan University, Charsadda, Pakistan. He has published a number of research papers. His research area of interest is General Linguistics, Pragmatics, Discourse Analysis, and Translation Studies.

Organizers and Organizing Committees

Members Organising Committee

1) Dr. Rasib Mahmood

Islamia College University, Peshawar

2) Prof. Dr Asma Kashif Shahzad

COMSATS University Islamabad, Vehari Campus

3) Dr Iren Boyarkina

University of Rome, Italy

4) Prof Dr Nailah Riaz

The University of Faisalabad

5) Dr. Eng. Vimbai Pachawo

Technical and Advertising Committee

1) Dr. Eng. Vimbai Pachawo

2) Dr. Inam Ullah

3) Dr. Huma Ahmad

Moderators

1) Dr Huma Ahmed

University of Lahore

2) Dr Inam Ullah

Bacha Khan University

Academia Humanities at a Glance

Academia Humanities is an Educational Organization affiliated with Ramotitanico—a Portugal based company, which offers services in four departments namely Education, Transport, Agriculture, and Construction. Academia Humanities is a branch of its educational department, offering help through consultation and research in education worldwide. The main aim of the organization is to facilitate and make access to education easy. The founders of the organization believe in indiscriminate inclusivity. It organizes research activities such as conferences, training sessions, and webinars with the sole aim to bring the best of minds together for the collective and common good of humanity.

Humanities Beyond Borders: Culture, Identity, and Global Dialogues

The 1st international conference on "Humanities Beyond Borders: Culture, Identity, and Global Dialogues" was organized by Academia Humanities organization in collaboration with Ramotitanico (Braga- Portugal) on June 27-28, 2026. It aimed at providing an interdisciplinary platform for the latest evolutionary and innovative literary, linguistic and pedagogical research and responses to the ever-changing world socially, economically, culturally, politically and many other different ways. It looked at how Language, Literature and teaching/learning practices represent, manifest and impact future of society within and without borders. The conference attracted a huge number of participants and presenters from around the globe including countries like UK, Italy, Portugal, Tunisia, Oman, Saudi Arabia, China and Pakistan. All the participants lauded the efforts of Academia Humanities and requested for more academic activities like this.

Themes of the Conference

The invited abstracts for paper presentations in the fields of Linguistics, Applied Linguistics, Cultural Studies, and Literature. The topic suggestions comprise, but are not limited to:

- Postcolonial Studies
- Cultural Memory and Identity
- Migration and Diaspora
- Gender and Feminist Studies
- Digital Humanities
- Comparative Literature
- Globalization and Culture
- Language, Power and Representation
- Cultural Contact Zone
- War Literature, Identity, and Economy in 2026
- New World Order, Bipolar and Unipolarity in Literature
- Education in 2026
- TESOL
- Linguistics

Blank Space, Black Ink: Mapping the Dolorous Cartographies of War Narratives

Bootheina Majoul, PhD, HDR, ISLT-University of Carthage, Tunisia

ABSTRACT

This paper investigates war narratives as emblematic representation of dolorous cartographies embedded within writers, their protagonists, and stories. Such texts extend into blank spaces where black ink draws trajectories giving agency to the absent, silenced, and forgotten. Focusing on the (in)visible aspects of war and trauma, this paper will resort to critical cartography (Harley, 1989) and affect theory (Massumi, 2002) to show that war maps (both real and imaginary) extend into affective topographies that should be investigated and analyzed as alternative versions of real traumas. In such sense, the *blank space* (being it: geographic emptiness, prohibited places, or the page of a book) acts like the place of truth and possibilities. On the other hand, black ink stands for the trace *à la* Derrida, the scar or an ever present past, i.e., the embodiment of an unerasable memory. Through a close examining of a selection of war narratives such as: *Il y a sur cette terre qui mérite vie* (2025), *The Wind Blows Away Our Words* (1987), *I Saw Ramallah* (1997), *Terre et cendres* (2000), *Le retour Imaginaire* (2005), and *Stones into Schools* (2009) among others, this paper will attempt to show the geographies of possibilities offered by writing, and the palimpsestine potential of words that offer an epistemic aperture, allowing trauma to turn into art, as it transfigures by means of stories the erroneous version of history imposed by hegemonic forces. Black ink on blank papers voices silence and turns absence into an ever-present trace of uncontested presence. Dolorous cartographies of memory, grief, and exclusion become the cleft from which enters rays of hope. Thus, by means of blackness, blank turns into the site of alternatives, yet of possibilities.

Keywords: *Blank Space, Real Traumas, War Narratives, Mapping*

Intergenerational Relationships and Artificial Intelligence in English and American utopian / dystopian fiction

Dr. Iren Boyarkina, Sapienza University of Rome, Italy

ABSTRACT

The present paper aims at investigating intergenerational relation and Artificial Intelligence in English and American utopian and dystopian literature. Intergenerational relationships are important aspects of society in many works of utopian and dystopian fiction. Many utopian writers explored these aspects in their fiction and offered their solutions for improving intergenerational relations in society and the position of ageing people in it. The paper explores utopias and dystopias in the works by George Orwell, Lois Lowry and Olaf Stapledon, while focusing on the issues of intergenerational relationships and their contribution to the social fabric and structure in these novels. Orwell emphasizes the importance of intergenerational relationships but in his *Nineteen Eighty-Four* (1949) intergenerational relations become also a powerful instrument of spying and controlling people. The same tendency we observe in the novel *The Giver* (1992) by Lowry, where family members are spied by each other, not to mention the Elders who can spy everyone in their community and appear in the family houses any time they want. Olaf Stapledon emphasizes the importance of intergenerational relationships for the improvement of the human species in his fiction, especially in *Last and First Men* (1930), which the present paper is going to explore.

From Hybridity to Planetarity: The Expanding Horizon of Global Humanities

Dr. Huma Ahmad, The University of Lahore

ABSTRACT

This research proposes a critical rethinking of 'Global Humanities' through the conceptual shift from hybridity to planetarity. Drawing upon postcolonial and contemporary literary frameworks, it argues that while earlier Humanities scholarship, particularly influenced by Homi K. Bhabha's notion of hybridity, focused on cultural negotiation, identity formation, and diasporic belonging, the complexities of the twenty-first century demand a broader, more inclusive paradigm. Through a comparative reading of Hanif Kureishi, Ben Okri, and Amitav Ghosh, this study traces an intellectual and literary trajectory that expands the meaning of community. Kureishi's fiction foregrounds cultural hybridity and the tensions of multicultural coexistence. Okri's narratives move beyond identity toward relationality, emphasizing shared vulnerability and interconnected human experiences within postcolonial contexts. This trajectory culminates in Ghosh's *Gun Island*, where climate change, migration, and ecological disruption reframe human existence within a planetary framework that includes non-human life and environmental systems. Utilizing Gayatri Chakravorty Spivak's concept of planetarity, the study highlights the distinction between the "globe" as a human construct and the "planet" as a space of alterity and ethical responsibility. It argues that contemporary literature increasingly reflects this shift by depicting interconnected ecological crises that transcend national and cultural boundaries. Ultimately, the paper contends that Global Humanities must move beyond cultural coexistence to address planetary coexistence. By integrating ecological awareness, ethical responsibility, and more-than-human perspectives, the Humanities can better respond to the interconnected challenges of the present and reimagine sustainable futures.

Keywords: *planetarity, global humanities, Kureishi, Amitav Ghosh, hybridity*

Understanding Who we are How We Learn: Exploring the Connection Between Personality Traits and Learning Style

Dr. Iman Al-Khalidi, University of Technology and Applied Sciences, Oman

ABSTRACT

This study aims to examine two key variables that play a significant role in shaping teaching practices and academic performance within the higher education context at the University of Technology and Applied Sciences (UTAS), Nizwa. The study is grounded in the Big Five Model of personality, which emphasizes five major dimensions: Openness, Conscientiousness, Extraversion, Agreeableness, and Neuroticism. Drawing on quantitative data collected through student surveys and classroom observations, the findings reveal moderate variation in students' personality traits and indicate a meaningful relationship between personality traits and preferred learning strategies. Higher levels of Openness, Conscientiousness, Extraversion, and Agreeableness, alongside lower levels of Neuroticism, were found to be associated with more dynamic and engaging learning environments. The study offers important pedagogical and theoretical implications for educators, researchers, and stakeholders in higher education in Oman, particularly in designing learner-centered instructional strategies that align with students' personality profiles.

Keywords: *personality traits, learning styles, teaching methodologies, student profile*

Representing Migratory Experience and Identity Crisis in *Khuda Ki Basti* and *Sarzamin-e Noch*: A Comparative Study

Dr. Azadeh Mehrpouyan, Assistant Professor, Department of English Language and Literature, Velayat University, Iranshahr, Iran

ABSTRACT

This article offers a comparative study of the representation of migratory experience and identity crisis in *Khuda Ki Basti* by Shaukat Siddiqui and *Sarzamin-e Noch* by Keivan Arzaghi. Rather than treating migration as a merely geographic displacement, the study approaches it as a socio-cultural rupture that reorganizes subjectivity, memory, belonging, and ethical self-understanding. In both novels, migration appears as a liminal condition in which the migrant subject is suspended between loss and adaptation, displacement and re-inscription, and the desire for social mobility and the persistence of psychic estrangement. The comparative reading shows that Siddiqui foregrounds migration as a historically inflected process shaped by post-Partition dislocation, urban precarity, and the fragmentation of communal bonds, whereas Arzaghi presents migration through the lens of transnational mobility, diasporic aspiration, and the destabilization of identity in the host land. Despite their different cultural and historical coordinates, both texts dramatize the erosion of stable identity and expose the migrant's struggle to negotiate memory, language, and social recognition. The article argues that the crisis of identity in these novels is not an accidental consequence of migration but its central epistemic and affective structure. By reading the novels comparatively, the study illuminates how migrant fiction from South Asia and Iranian literature converges in representing displacement as a condition of divided belonging, wherein the self is continuously reconstituted under the pressure of historical rupture and cultural negotiation.

Keywords: *migration; identity crisis; comparative literature; migrant fiction; displacement; post-Partition literature; diasporic subjectivity; cultural belonging; Shaukat Siddiqui; Keivan Arzaghi*

Language as Power in the Digital Age: From the Linguistic Marketplace to the Algorithmic Agora

Prof. Dr Nailah Riaz Head Department of English Language and Literature, The University of Faisalabad

ABSTRACT

This study is based on our book, *Language Power and Digital Society: Sociolinguistic Perspectives on Online Communication*. This abstract particularly explores the transformation of linguistic power in contemporary digital society by examining the shift from Pierre Bourdieu's notion of the linguistic marketplace to the algorithmically structured communicative environments of social media platforms. The primary objective is to investigate how digital infrastructures shape the production, circulation, valuation, and visibility of discourse in networked publics. The study addresses the following research question: How do algorithmic systems reconfigure linguistic capital, communicative competence, and symbolic power in digitally mediated environments? The theoretical framework draws upon Bourdieu's concepts of linguistic capital, symbolic power, and symbolic violence, while integrating insights from digital sociolinguistics, platform studies, and theories of algorithmic governance. Employing a qualitative, critical-sociolinguistic methodology, this research synthesizes contemporary scholarship on digital communication, platform architectures, and online participation. The analysis demonstrates that digital platforms function as sociotechnical marketplaces in which communicative visibility is governed not only by linguistic resources but also by platform affordances, recommendation systems, moderation regimes, and engagement-driven metrics. Although networked environments expand opportunities for participation and facilitate the emergence of counter publics, they simultaneously reproduce inequalities through algorithmic gatekeeping, unequal digital literacies, and asymmetrical governance structures. The findings reveal that communicative power increasingly emerges from the interaction between human agency and algorithmic infrastructures rather than from linguistic

competence alone. This research concludes that language in the digital age must be understood through an integrated framework linking discourse, technology, and politiceconomy. Future research may further examine artificial intelligence, multilingual digital ecologies, platform regulation, and linguistic justice in increasingly automated communication systems.

Key words: Language and Power; Digital Discourse; Linguistic Marketplace; Algorithmic Governance; Algorithmic Agora

Are You a Native? A Question That Matters and Shatters in English Teachers' Recruitment in the Gulf

Dr. Inam Ullah, Bacha Khan University, Charsadda, Pakistan

ABSTRACT

The recruitment of English language teachers in the Gulf region continues to be deeply shaped by the ideology of native-speakerism. Across the United Arab Emirates, Saudi Arabia, Qatar, Kuwait, Bahrain, and Oman, schools and language institutes frequently prioritize applicants from countries identified as “native English-speaking nations,” while highly qualified non-native English-speaking teachers often face exclusion despite strong academic credentials and teaching experience. This study investigates how the discourse of native-speaker preference is reproduced through contemporary online recruitment advertisements and audience responses on social media. Data were collected from LinkedIn recruitment advertisements and Facebook job posts related to English language teaching positions in the Gulf region. The study examined both recruitment language and public comment sections in order to identify patterns of linguistic discrimination, implicit racial hierarchies, and perceptions of teaching competence. A quantitative content analysis was conducted on 60 advertisements and 420 comments collected between January 2024 and May 2026. The findings reveal that 71.6% of the analyzed advertisements explicitly required applicants to be native English speakers, while another 18.3% used indirect formulations such as “native-level fluency” or “passport from an English-speaking country.” The data further demonstrate that hiring preferences frequently correlated with assumptions about race, nationality, pronunciation, and marketability rather than pedagogical expertise. Public comments under recruitment advertisements revealed strong disagreement among educators, many of whom argued that teaching effectiveness depends more on training and classroom competence than birthplace or accent. The study concludes that native-speakerism remains embedded in Gulf recruitment practices despite decades of scholarly criticism. It also argues that digital recruitment platforms have become important sites where linguistic discrimination is both normalized and contested.

Linguistic Neo-Imperialism and Standard Language Ideology in Pakistan: A Qualitative Study of English Textbooks in Khyber Pakhtunkhwa, Pakistan

Mr. Bilal Khan

PhD Scholar at Lincoln University and College, Malaysia

ABSTRACT

This research investigates the embedded ideologies of linguistic neo-imperialism and standard language in English textbooks used in primary schools in Khyber Pakhtunkhwa, Pakistan. Rooted in a post-colonial context where English is often positioned as a symbol of socio-economic mobility and modernity, the study critically examines how the dominance of Western language and culture is normalized through educational content, often at the cost of indigenous identity, linguistic plurality, and cultural heritage. The study adopts a qualitative research approach and employs content analysis to examine one English textbook of grade 5, selected from elite private primary schools. Framed within the theoretical constructs of linguistic neo-

imperialism and standard language ideology, the analysis seeks to uncover the textual and visual discourses that sustain linguistic hierarchies and cultural hegemonies. Findings reveal a disproportionate emphasis on Western literature, culture, and values, while native cultural expressions are either omitted or misrepresented. The research concludes with a call for critical pedagogical reform and the indigenization of English language education to ensure a more culturally responsive and inclusive curriculum framework in Pakistan.

Keywords: *linguistic neo-imperialism, standard language ideology, English textbooks, cultural alienation, identity, qualitative content analysis.*

Negotiating Islam: Religious Discourse and Modernity in Hanif's *Rebel English Academy* and Shamsie's *Best of Friends*

Maham Akram (PhD Scholar), The University of Faisalabad

Corresponding Author: Prof. Dr. Nailah Riaz, Head, Department of English Language and Literature, The University of Faisalabad.

ABSTRACT

This research aimed to explore the ways in which Islam has been represented and negotiated as a discursive tradition in the modern Pakistani Anglophone fiction of Mohammed Hanif's *Rebel English Academy*, and Kamila Shamsie's *Best of Friends*. It addressed an important void in existing scholarship that has largely concentrated on the relationship between Pakistani fiction and themes like postcoloniality, politics, gender, and modernity, while comparatively neglecting the role of Islam as a lived, contested, and historically constituted discourse within literary narratives. This study examined the struggle of selected characters in the negotiation of Islamic values, secular pressures, social authority and personal identity in contemporary Pakistan. The selected novels raise issues of religion, modernity, class, gender and identity in Pakistan, but from different perspectives within the framework of their stories. Hanif's *chosen book* is a satire on the political and institutional intrusions into religious discourse, whereas Shamsie's identified *novel* deals with personal and social conflicts over contradicting notions of freedom, memory, friendship and moral belonging. This contrast is particularly relevant for a comparative study of public and private negotiations of Islamic identity. The theoretical approach of the study is Talal Asad's concept of Islam as a discursive tradition and the analytical approach is through the prism of the concept of discourse, power and subject formation by Michel Foucault. The methodology is qualitative and interpretive, using discourse-oriented textual analysis and close literary analysis of representation, conflict, characterization and satires. This research contended that Islam in these novels does not appear as a monolithic or fixed tradition but a negotiated tradition that is history and politics, social power and individual agency shaped. The present work helped in the study of Pakistani literature as it revealed the fluidity, contestation, and entanglement of Islamic identity in the context of secularism, authority, and modern Muslim subjectivity in contemporary fiction.

The Ethics of Representing Refugee Suffering: Trauma Aesthetics and Global Literary Consumption

Abbas Dakhil Abd Alabbas¹ & Ahmed Dakhil Abed^{2*}

¹Department of English, Jamia Millia Islamia, Jamia Nagar, New Delhi, India, 110025

²Department of English, University of Karbala, Iraq.

ABSTRACT

This abundance of refugee experiences in the world literature of today, however, poses a set of pressing ethical issues regarding the politics of representation, the aestheticization of trauma, and the circumstances of its production, circulation and consumption in unevenly distributed global markets. This paper claims that where literary form makes the lives of others legible to the predominantly Global North audience, then the literary

form is not politically innocent. The paper draws on Cathy Caruth's theorisation of the unspeakable and the work of Shoshana Felman and Dori Laub on testimony and witnessing to explore how refugee literature attempts to speak the unspeakable, and make it palatable and saleable as a narrative a process that can lead to the replacement of empathetic observation for structural critique. The paper reflects on the concept of 'distant suffering' of Luc Boltanski and the 'politics of pity' of Hannah Arendt, and illustrates how the aestheticisation of displacement can serve to strengthen rather than challenge the hierarchies of power that create refugeehood in the first place, through the use of lyrical fragmentation, sublime devastation, and sentimentalised testimony. Building upon Gayatri Chakravorty Spivak's critique of representation, this paper also critiques the ways in which publishing gatekeeping systems in the Global North affect who can tell which refugee stories and how, and in what form, shedding light on the ethical and structural nature of the commodification of suffering. The paper also considers counter-narratives, the refugee and diaspora authors who take back their aesthetic agency by exercising formal hybridity and multilingualism and oral traditions, who reject the victimhood script imposed by the literary marketplace. It ends by suggesting an ethics of representation that is based on accountability to the represented – a narrative reciprocity and critical reader self-awareness of complicity in the global system that produces the very suffering that is consumed as literature.

Keywords: *trauma aesthetics, refugee representation, postcolonial literature, ethics of witnessing, distant suffering, narrative agency, world literature*

Language Testing: A Case Study of ESL Learners' opinions about Language Assessment and L2 Proficiency at bachelor's Level

Sundas Rauf (PhD Scholar) COMSATS University Islamabad (Vehari) Campus

ABSTRACT

The present study was designed to investigate students' perceptions of language assessment practices and their impact on second language (L2) proficiency at the bachelor's level. The study primarily focused on formative assessment (Assessment for Learning) and summative assessment (Assessment of Learning) and examined their role in enhancing learners' language skills and academic performance. The research was conducted in the Pakistani ESL context at Government Post Graduate College for Women, Mailsi. The rationale for conducting this study emerged from the observation that students often obtained comparatively higher scores in formative assessments but lower scores in summative examinations. This discrepancy raised concerns regarding the relationship between assessment practices and actual language proficiency. The study aimed to explore students' opinions about existing assessment techniques and to determine the extent to which these techniques contribute to the development of L2 proficiency. A quantitative research design was employed, and data were collected through a structured questionnaire administered to bachelor-level students. The validity and reliability of the instrument were ensured through expert evaluation and statistical measures. Data analysis was conducted using descriptive statistical techniques to identify students' perceptions regarding assessment, feedback practices, and language proficiency development. The findings revealed that students generally considered formative assessment more beneficial for learning and skill development than summative assessment. The results further indicated that assessment techniques significantly influence learners' motivation, confidence, and language proficiency. However, many students expressed dissatisfaction with the feedback provided after assessments and believed that their proficiency level did not always correspond to the grades they obtained. The study concludes that effective assessment practices, particularly formative assessment accompanied by constructive feedback, can play a vital role in improving learners' L2 proficiency and academic achievement.

Between the Unconscious and the Algorithm: Psychoanalysis and Digital Postcolonial Futures in Pakistani English Fiction

Mariyum Siddiq, PhD Scholar at The University of Faisalabad

ABSTRACT

This paper explores the convergence of psychoanalysis, postcolonial theory, and digital modernity in contemporary Pakistani English fiction, examining how technological systems reshape identity, subjectivity, and structures of power in the postcolonial world. Situated within the growing field of speculative and technocultural literary studies, the study investigates how Pakistani writers imagine the psychological and political consequences of living within algorithmically governed societies marked by surveillance, data extraction, and digital control. Drawing upon psychoanalytic theories of Sigmund Freud and Jacques Lacan alongside postcolonial perspectives developed by Homi K. Bhabha and Edward Said, the paper argues that digital technologies increasingly function as extensions of psychological and ideological power. Surveillance systems, artificial intelligence, and algorithmic structures are interpreted not merely as technological tools but as mechanisms that penetrate the unconscious, regulate desire, and produce self-monitoring subjects. Lacan's concept of the gaze becomes particularly significant in understanding how individuals internalize surveillance and reconstruct their identities within digitally mediated environments. The paper further contends that Pakistani English fiction represents technology as both emancipatory and oppressive, reflecting a broader postcolonial anxiety regarding globalization, cyber-capitalism, and the erosion of personal autonomy. Through themes of fragmented identity, virtual existence, paranoia, memory, and technological dependency, these narratives reveal how postcolonial subjects negotiate the tensions between agency and control in an increasingly digitized world. Ultimately, this study proposes the concept of "psycho-digital postcoloniality" to describe the intersection of unconscious processes and algorithmic governance in contemporary literary imagination. By bringing psychoanalysis into dialogue with postcolonial digital studies, the paper contributes to emerging interdisciplinary debates on technology, subject formation, and the future of Pakistani English fiction in the age of artificial intelligence and surveillance capitalism.

Keywords: *Digital surveillance; algorithmic governance; speculative fiction; Artificial Intelligence; surveillance capitalism.*

Narrating Displacement: Memory, Identity And Cultural Resistance In Palestinian Intellectual Discourse

Dr. Tanjeel Ahmed, Ph.D. Aligarh Muslim University, Aligarh

ABSTRACT

The ongoing experience of displacement has fundamentally shaped Palestinian life, turning geographic loss into a complex landscape of memory and meaning. This study addresses a critical gap in postcolonial studies by exploring how contemporary Palestinian intellectual discourse functions as a vital space for cultural resistance. The primary objective of this research is to investigate how writers, theorists, and artists reconstruct individual and collective identities in the face of ongoing colonial erasure. Rather than treating exile as a passive state, this paper highlights the significance of narrative production as an active political tool that bridges geographic fragmentation and preserves historical continuity. The findings reveal that Palestinian intellectual work does much more than document trauma; it actively counters dominant political narratives. By focusing on the intersection of memory and resistance, this paper argues that narrating displacement is an enduring form of cultural persistence. Ultimately, this research underscores how intellectual discourse transforms personal grief into a collective archive of survival, proving that while physical boundaries can be violently enforced, a community's shared identity remains resilient against erasure. To achieve this, the study adopts a qualitative research methodology grounded in text based analysis and cultural critique. We closely examine a curated selection of contemporary Palestinian literature, philosophical essays, and oral history

archives. Through the theoretical lenses of memory studies and postcolonial theory, these texts are analyzed to trace recurring themes of spatial loss, cultural heritage, and identity reclamation.

KEYWORDS: *Palestinian Intellectual Discourse, Cultural Resistance, Memory Studies, Postcolonial Theory, Textual Analysis.*

An Analysis of Discursive practices by Male and female twitter users regarding Palestinian conflict

Zarrar Bukhari, Bacha khan university Charsadda

ABSTRACT

This study investigates the discursive practices of male and female Twitter users regarding the Palestinian conflict, with a particular focus on their communicative styles and use of supportive, assertive, and confrontational language. The study is grounded in Deborah Tannen's Language and Gender Theory, which suggests that men and women often employ different communication styles based on their interactional goals. A mixed-method research approach was adopted, combining qualitative discourse analysis and quantitative frequency analysis. Data were collected from publicly available tweets related to the Palestinian conflict posted by male and female Twitter users. Through purposive sampling, a total of 300 tweets were selected and analyzed. The findings reveal noticeable differences in the communicative styles of male and female users. Female users tended to employ more supportive and empathetic language, emphasizing humanitarian concerns, emotional expression, and solidarity. In contrast, male users more frequently used assertive and confrontational language, focusing on political arguments, criticism, and ideological positions. The quantitative analysis further supported these findings by showing a higher occurrence of supportive language among female users and a greater use of assertive and confrontational expressions among male users. The study concludes that gender influences communicative styles in online political discourse and that Twitter serves as a platform where gendered patterns of communication are reflected and reproduced. The findings support Deborah Tannen's Language and Gender Theory and contribute to the fields of sociolinguistics, discourse analysis, gender studies, and digital communication. Future research is recommended to explore gendered discourse across different social media platforms and cultural contexts.

Keywords: *Palestinian conflict, Twitter discourse, gender and language, communicative styles, Deborah Tannen, discourse analysis, social media communication.*

Instrumentarian Power and Data Colonialism in Vahuni Vara's The Immortal king Rao: A Corpus-Based Digital Humanities Analysis

Mr. Abbas

ABSTRACT

This study analyzes Vahuni Vara's *The Immortal King Rao* through the theoretical lens of Instrumentarian Power, as articulated by Shoshana Zuboff within *The Age of Surveillance Capitalism*, alongside Data Colonialism as theorized by Nick Couldry and Ulises A. Mejias in *The Costs of Connection*. Zuboff defines instrumentarian power as a form of power grounded in continuous data extraction and the shaping of human behavior toward predictable outcomes, while Couldry and Mejias conceptualize data colonialism as the large-scale appropriation of human life through data. Despite the growing influence of these frameworks, limited corpus based digital humanities research has addressed their literary inscription in contemporary fiction. Addressing this gap, the study identifies *The Immortal King Rao* as the primary corpus and argues that the novel encodes instrumentarian power through processes of datafication, which enable large-scale data appropriation constitutive of data colonialism. The analysis mobilizes Zuboff's account of prediction and control alongside Couldry and Mejias's emphasis on appropriation to interpret platform systems as mechanisms of extraction, commodification, and monetization. Methodologically, the research mobilizes Voyant Tools and AntConc to conduct corpus-based analysis, focusing on frequency distribution, collocation patterns, and concordance mapping of key lexical fields. Findings reveal consistent clustering of terms

associated with computation, extraction, prediction, and control, indicating a structured linguistic representation of data-driven power. This analysis contributes to Digital Humanities, Surveillance Studies, and Data Colonialism scholarship by demonstrating how computational textual analysis operationalizes critical theories within literary analysis.

Keywords: *Surveillance Capitalism, Instrumentarian Power, Datafication, Data Appropriation, Data Colonialism, Digital Humanities, Corpus-Based Analysis*

Cultural Diversity and National Identity in Pakistan: Challenges and Opportunities in a Globalized World

Alina Bukht, PhD English Linguistics Scholar, COMSATS UNIVERSITY, VEHARI

ABSTRACT

Globalization has transformed the ways individuals interact, communicate, and construct their cultural identities, creating new opportunities for intercultural engagement while also raising concerns about the preservation of local cultures and national values. In Pakistan, a country characterized by rich cultural diversity, multiple linguistic traditions, and distinct ethnic identities, the influence of global cultural flows has become increasingly visible, particularly among young people. This study explores the relationship between cultural diversity, national identity, and globalization in the Pakistani context, with a focus on understanding how individuals perceive and negotiate their cultural affiliations in an interconnected world. The research seeks to examine the extent to which exposure to global cultures influences perceptions of national identity and attitudes toward cultural diversity while assessing the role of intercultural interaction in promoting social cohesion and mutual understanding. A quantitative research design will be employed, and data will be collected through a structured questionnaire administered to university students from public and private higher education institutions across Pakistan. Using a stratified random sampling technique, participants from different provinces and socio-cultural backgrounds will be included to ensure broader representation. The collected data will be analyzed using SPSS, where descriptive statistics will provide an overview of respondents' perceptions, while correlation and regression analyses will be used to examine the relationships among globalization, cultural diversity, and national identity. The study is expected to reveal how Pakistani youth balance local cultural values with global influences and how cultural diversity can contribute to a stronger sense of inclusive national identity. The findings will contribute to existing literature on culture and identity and provide valuable insights for educators, policymakers, and researchers working to promote cultural understanding, social integration, and sustainable development in Pakistan.

Keywords: Cultural Diversity, National Identity, Globalization, Pakistani Youth, Cultural Heritage, Intercultural Understanding, Social Cohesion, Pakistan

The Pragmatics of Publication: Syntactic Complexity and Force in Stratified Academic Corpora

Ms. Aneeqa Faraz, Department of English & Linguistics, University of Agriculture, Faisalabad,
Dr. Ayesha Asghar Gill, Assistant Professor, Department of English & Linguistics, University of Agriculture, Faisalabad.

ABSTRACT

Effective communication in academic writing relies heavily on how information is structured, presented, and conveyed to the reader. Non-canonical sentence structures specifically the passive voice, cleft sentences, and topicalization are vital tools for this type of information packaging. While previous research has explored standard syntactic patterns in academic writing, a critical gap remains regarding how the strategic use of these non-canonical structures differs across varying tiers of publication quality. The primary objective of this study

is to fill this gap through a comparative corpus analysis of the conclusions of 80 research articles from the fields of linguistics and literature, comprising 40 from high-tier (W-category) journals and 40 from mid-tier (Y category) journals. To analyze the data, the study draws on the Huddleston and Pullum (2005) model to categorize the syntax, Prince's (1978) model to understand information packaging, and Systemic Functional Linguistics (SFL) Theme-Rheme dynamics to examine textual flow. The findings show that the concluding triad of W-category journals features a higher and more strategically varied use of non-canonical word orders to maintain cohesion and introduce new information compared to Y-category publications. This work reveals the specific syntactic choices that distinguish high-level academic discourse. Ultimately, future research could extend this framework to analyze learner corpora, investigating how novice academic writers manage information structure compared to established authors.

Keywords: *Information packaging, Non-canonical word order, Discourse cohesion, Academic writing syntax, Corpus linguistics.*

Identity, Displacement and Belonging in Maria Reva's Endling: A Critical Discourse Analysis of War-Induced Identity Reconstruction

Professor Dr. Mam Asma Kashif Shahzad (Humanities Dept. COMSATS Vehari)
Assia Aslam Assistant Professor of English Govt. Graduate College (w) Burewala, PhD Scholar

ABSTRACT

Themes of identity, displacement and belonging are the dominant themes in the war literary discourses. The present research is an exploration of these interrelated themes in the novel *Endling* written by Maria Reva through the lens of Critical Discourse Analysis (CDA). Set against the background of the Russian attack on Ukraine, the novel presents the experiences of individuals whose lives are intensely disordered by war, forced migration and social unpredictability. The research aims to explore how war-induced displacement affects the construction, deconstruction and reconstruction of personal and collective identities. And how language is employed to represent feelings of loss, estrangement, resilience and belonging. Based upon Norman Fairclough's three-dimensional model of Critical Discourse Analysis (1995), the researcher studies the selected textual extracts from the novel to identify the linguistic and discursive strategies through which identity and displacement are represented. The analysis focuses on lexical choices, pronoun usage, narrative positioning, representations of home and homeland and discourses of memory and trauma. The study also incorporates Stuart Hall's Theory of Cultural Identity (1990) to understand identity as a dynamic and progressing phenomenon shaped by historical, social and political circumstances rather than a fixed or stable construct. Using a qualitative research design, the study examines how displaced characters transfer their sense of self amidst the uncertainties of war and exile. Particular attention is paid to the ways in which notions of belonging are challenged and redefined as characters moved and displaced into different social, cultural and geographical landscapes. The findings are expected to reveal that identity in *Endling* is continuously reconstructed through discourse, memory and interaction with changing realities. Furthermore, the study demonstrates that displacement not only produces feelings of loss and fragmentation but also creates possibilities for resistance, adaptation and the rise of new forms of belonging. By mingling literary analysis with an applied linguistic perspective, this research contributes to contemporary discussions on war literature, migration studies, and discourse analysis that unmask the process of identity formation. It highlights the fundamental role of language in shaping human experiences of conflict, displacement and cultural transformation.

Media, Power And Biases: A Critical Analysis Of Colourism And Class Inequality In Drama Serial ‘Parizaad’

Dua Saud, Dr Samra Ashfaq. Institutional Affiliation: Bahria University, Islamabad.

ABSTRACT

This study looks at the issue of colourism and class inequality in the drama serial ‘Parizaad’. Agenda-setting is utilised as the theoretical framework. The study analyses the dialogues, language use, and character interaction through qualitative content analysis. The findings of the study highlight how the narrative persistently underscores the discriminatory behaviour concerning skin tone and class status. Through the protagonist changing self-perception and opposition to such set standards and prejudices, the drama not only reflects the entrenched socio-cultural partiality but also critiques them through motivation, moral authority and dignity of Parizaad. The results highlight how Parizaad sets the agenda by diverting viewers' attention to such issues and raising their awareness of questioning such benchmarks. This extension of the agenda-setting theory beyond its traditional news contexts, the research underlines the significance of infotainment narratives in constructing cultural discourses and impacting public consciousness with regard to such social issues. The show is an infotainment story, which entertains people and, at the same time, educates them through its story. The drama gives Parizaad dignity and depth which encourages normal people to empathize with his character and deem previous prejudices as vile. Consequently, the audience gets knowledge about class disparity and colourism as vital issues while also taking a dig at the stereotypes.

Keywords: *Agenda-setting, Colourism, Class inequality, Parizaad.*

Challenging Western narrative of World War and The Absurdity of Life in Selected Western and South Asian War Fiction

Faisal Jahangeer, Visiting Lecturer, University of Punjab, Gujranwala Campus,
Sobia Younas, Lecturer Department of Education, Government College for Women University, Sialkot.

ABSTRACT

The objective of this paper is to examine how dominant Western war narratives shape West-centric epistemology of the Absurdity of Life in selected war fiction while suggesting an Indigenous and decolonial reframing through Linda Tuhiwai Smith's *Decolonizing Methodologies*. For this examination, this research focuses on Ernest Hemingway's *A Farewell to Arms* as representative Western texts along with examination of Mulk Raj Anand's *Across the Black Waters* as South Asian counter-narratives. The existing scholarship in general treats Western war epistemology of the Absurdity of Life as a universal experiences and responses to war. At the same time it marginalizes or ignores Indigenous and South Asian experiences and responses to the war. Western and South Asian war fiction has been examined comparatively by a few studies to unearth how Western and South Asian war fiction generate divergent understanding of shared historical events. This article addresses that gap by interrogating epistemological assumptions embedded in Western war literature. By emphasizing relationality, material purpose, and epistemic justice, Indigenous war literature reconceptualizes war and highlights that Western war literature is far from a neutral intellectual activity rather a deeply political and epistemologically charged engagement. Methodologically, this paper adopts Linda Tuhiwai Smith's decolonial framework to decenter Euro-American-centric war epistemologies as the exclusive lens for analysis. Reading through an Indigenous framework compels a reorientation of war literature as a space of responsibility rather than existential despair. Thus, war literature from indigenous perspectives carries divergent perspectives. The comparative analysis of Western and South Asian war fiction provides a ground for intellectual decolonization from romantic celebration and global application of the epistemic construct of The Absurdity of Life.

Key words: *World war narratives, Epistemology of the Absurdity of Life, Decoloniality, Indigenous perspectives of war narratives.*

English as Linguistic Capital: Negotiating Postcolonial Identity in *American Fever* and *Home Fire*

Irzam Shahzad, PhD (Scholar) English Literature, The University of Faisalabad

ABSTRACT

English continues to be a subject of contention in the postcolonial societies, where issues of power, identity and social mobility are at stake. There has been a significant amount of research on modern-day writing in English in Pakistan that has largely focused on the exploration of Pakistani migration, globalization, cultural hybridity and construction of identity. However, limited research has been done on the role of English as a medium of linguistic capital in the construction of post-colonial identity formation. This work seeks to fill this gap and explore the use of English to convey prestige, authority and social distinction in Dur e Aziz Amna's *American Fever* and Kamila Shamsie's *Home Fire*. The study employs the Bourdieu's concepts of cultural and linguistic capital and symbolic power to the selected Pakistani texts. It uses a qualitative text analysis approach to investigate and analyze the representation of education, class aspiration and cultural belonging and how the characters' access to English is related to their social location and self-perceptions. The analysis reveals that English is a useful and works as a linguistic capital that allows the opportunities of elite education, institutional legitimization and cosmopolitan opportunities for the characters. In the meantime, English is symbolic and creates tensions between the local and desires for the global and makes identity formation difficult. The findings revealed that the negotiation of the postcolonial identity that these texts have explored is not only a negotiation of cultural or national identity, but also a negotiation of differential access to the resources of the language and the social privileges these have. This study adds to postcolonial literary studies by showing the results of unequal access to English cause identity formation, symbolic power and social mobility in contemporary Pakistani literature.

Keywords: *Linguistic capital, postcolonial identity, social privilege, identity formation, American fever, Home fire*

A Corpus-Based Critical Discourse Analysis of Urdu Lexical Insertions in Contemporary Pakistani Short Stories: Exploring Postcolonial Identity Construction through Fairclough's Three-Dimensional Model

Kalsoom Afzaal, PhD Scholar and Lecturer at Minhaj University Lahore

ABSTRACT

The given research explores the cases of Urdu lexical injections into the modern Pakistani short stories through the prism of corpus-based Critical Discourse Analysis (CDA). This general purpose is to analyze the contribution of such lexical insertions in postcolonial identity construction process referencing in interest of the Three-Dimensional Model by Fairclough. The corpus of 30 short stories (198,450 words) of 3 Pakistani authors has been chosen and analyzed using the assistance of the AntConc software. Frequency analysis might identify 214 different types of Urdu lexicals having 3073 total counts. The findings indicate that religious (31) and kinship (21) areas are dominant in as far as lexical insertions are concerned. Words that were semantically clustered and super frequent words included Allah, amma, namaz and izzat. Collocation analysis also implied that there were strong relations to the themes of shared purpose (communal honor), ritual and familial legitimacy. Utilizing the framework by Fairclough, the research shows that foregrounding religious and communal identity is done through as a textual constant as a semantic and identity cluster. At the discursive scale, the Urdu insertions identify authors as the authoritarians of the culture when it comes to negotiating global readership. These lexical decisions are all about the postcolonial hybridity and language indigenization on the social level. The research has come up with a conclusion that Urdu lexical inserts are applied not merely

as stylistic fireworks but as ideological tools that give English people localness and construct hybrid Pakistani subjectivities. The methodological and theoretical combination of corpus linguistics and CDA and the means of postcolonial theory makes the given research one of the contributions to the study of literary discourse in the Pakistani case.

Keywords: *CDA, Lexical Insertion, Pakistani Short Stories, Fairclough 3D Model*

Impact of Strategic Leadership Practices on Achieving Competitive Advantage and Dynamic Capabilities: A Comparative Study of the UK and Pakistan Fashion Retail Industries

Farwa Zahoor, UK

ABSTRACT

The fashion retail sector plays a significant role in the economies of both the United Kingdom and Pakistan. However, these markets are operating under various leadership practices, economic situations, different conditions and management practices. In this increasingly changing environment and drastic variations, the organizations should focus on to develop competitive advantage and adapt quickly to changing customer demands, new technological innovations, digitalization and market disruptions. This study explores how strategic leadership practices influence the development of competitive advantage and dynamic capabilities within the UK fashion retail industry, while also making a comparison of leadership in UK and Pakistan's fashion sector. The research mainly focuses on different aspects of Leadership, vision, strategic Leadership, Strategic decision-making power, organization learning, the management of change and adaptation. It examines how these leadership practices enable organizations to improve flexibility, enhance operational effectiveness, and respond proactively to evolving market conditions. A mixed-method research design is proposed, combining quantitative surveys and qualitative interviews with managers and industry professionals from fashion retail organizations in both countries. The collected data will be analyzed to evaluate the relationship between strategic leadership, competitive advantage, and dynamic capabilities, while identifying similarities and differences across the two national contexts. The study is anticipated to demonstrate that effective strategic leadership contributes significantly to organizational resilience, innovation, and sustained competitiveness in both the UK and Pakistan. By offering a comparative perspective, this research seeks to expand current understanding of strategic leadership and provide practical recommendations for fashion retail organizations aiming to strengthen their competitive position and adaptability in dynamic markets.

An Ecolinguistic Analysis of Punjabi Proverbs: A Study of Conceptual Metaphors and Cultural Values in Traditional Ecological Knowledge

Komal Fatima

ABSTRACT

Punjabi proverbs are repositories of cultural knowledge and values. They offer linguistic foundations for analysing language patterns and indigenous knowledge from a worldview perspective. This study aims to analyse Traditional Ecological Knowledge (TEK) and cultural values embedded in language by examining metaphorical constructions, evaluative meanings, and human-environment relationships in nature-based metaphors in Punjabi proverbs from an ecolinguistic perspective. This study applies an integrated qualitative ecolinguistic approach incorporating Conceptual Metaphor Theory (CMT) and Appraisal Patterns Theory by evaluating the moral and affective meanings encoded in the cognitive mapping of metaphors to assess whether these proverbs are environmentally sustainable or exploitative. The dataset of this study is based on 20 proverbs collected from folklore collections, oral traditions, and published collections of proverbs, categorized in major ecological domains such as animals, birds, land and soil, water, food, weather and seasonal patterns,

plants and vegetation, agriculture, and natural elements. The results show that the Punjabi provides contain the coding of a structural ecological point of view in which the natural features are systematically arranged to make metaphorical and valuable understanding about human attitude and social system. They preserve traditional ecological knowledge by reflecting both ecological awareness and anthropocentric understanding of nature at the same time. The study highlights how proverbial discourse contains traditional environmental understanding and shape cultural constructed ecological perceptions.

Keywords: *Ecolinguistics, Punjabi Proverbs, Conceptual Metaphors*

Print vs Digital Dictionaries: A Comparative Analysis of Dictionary Use among University Students in Pakistan

Laiba Azhar

ABSTRACT

This study attempts to analyze the comparison of print dictionaries, electronic dictionaries, and contribution of both dictionaries to vocabulary development and language learning by the university students in Pakistan. The research aims to analyze students' preferences, understand the factors influencing the preferences, and see the influence of both print and electronic dictionary in students' lexicon and academic achievement. It also examines the positive and negative aspects of each type of dictionary and the amount of use made of dictionaries by students across various academic subject areas in their academic pursuits. The study was conducted by using mixed-method research design to get both quantitative and qualitative patterns of dictionary use. The data were collected from around 200 students from various academic streams (English, Sciences, Social sciences), both from public and private universities in Pakistan, using structured questionnaires and semi-structured interviews. Stratified random sampling was used to achieve a balanced sampling. The results showed that students' preferences were digital dictionaries due to their portability, easy access, speed of use and their special features including pronunciation, instant word search and contextual examples. While print dictionaries have become less popular than other dictionary tools, they continue to have educational benefits due to their greater level of focus, detail, and vocabulary recall. The results also revealed that many students sometimes employ both print and electronic dictionaries in line with their learning needs and contexts. The study findings are that print and digital dictionary are complementary aids in the vocabulary and language learning process and as long as students are well trained to use the dictionary they will be more beneficial.

Keywords: Digital Dictionaries, Print Dictionaries, Dictionary Use, Vocabulary Acquisition, University Students, Language Learning.

Comparative Study Of Human And Machine Translations: A Linguistic Analysis Of Li Bai's "Changgan Ballads" Translated By Ezra Pound And Meta

Laiba Fayaz Khan, Bacha Khan University Charsadda

ABSTRACT

This research conducts a comparative study of human and machine translation through a linguistic analysis of Li Bai's "Changgan Ballads" translated by Ezra Pound and Meta AI. Employing Fairclough's 3D model as theoretical framework, this research examines the translations from semantic, pragmatics and syntactic perspectives. The study aims to investigate the differences and similarities between human and machine translation in conveying the meaning of the poem. The analysis reveals the strength and limitations of both human and machine translation. The findings of this study contribute to a better understanding of the complexities of translation and the potential of machine translation in the essence of classical poetry.

Keywords: *Human translation, machine translation, Fairclough 3D model, semantic, pragmatics, syntax, Li Bai's Changgan Ballads, Ezra Pound, Meta AI.*

Necropolitical Sovereignty And The Construction Of Death Worlds: A Conceptual Metaphor Analysis Of Evidence Of A Genocide By Zulfiqar Ghose

Nadeem Jan, Bacha Khan University Charsadda

ABSTRACT

Genocide literature often relies on figurative and symbolic language to represent experiences that exceed ordinary forms of expression. In poetic discourse, violence is not always communicated through direct description; rather, it emerges through environmental imagery, silence, bodily suffering, and metaphoric structures that reflect fear, destruction, and social collapse. Drawing upon the cognitive approach developed by George Lakoff and Mark Johnson, the study highlights how ABSTRACT experiences related to trauma, suffering, and destruction are communicated through bodily and environmental imagery. Simultaneously, the necropolitical framework proposed by Achille Mbembe provides an understanding of how sovereign power functions through the regulation of life and death, reducing certain populations to conditions of disposability and social abandonment. Using a qualitative textual analysis method, selected metaphorical expressions from the poem are interpreted through conceptual mappings between source and target domains. The findings indicate that metaphors such as the slowing stream, the heavy air filled with the stench of death, the eerie calm, and the faceless unnamed victims symbolize the erosion of communal vitality, psychological suffocation, enforced silence, and the loss of identity under genocidal violence. These metaphorical structures further reveal a necropolitical environment in which mortality becomes normalized and human existence is subjected to systematic degradation. The study concludes that Ghose's poetic language functions as a powerful literary testimony by transforming sensory and environmental imagery into evidence of structural violence and collective trauma.

Keywords: *Necropolitical, CMT, Construction.*

Hybrid Belonging in the Fevered Body: Illness, Othering, and Cultural Negotiation in Dur e Aziz Amna's American Fever

Mahrukh Rana, PhD Scholar, The University of Faisalabad, Pakistan

ABSTRACT

This study investigates the complex interplay of illness, cultural othering, and identity formation in the context of transnational migration. It examines how the body becomes a site of cultural negotiation and resistance in Dur e Aziz Amna's *American Fever* (2022), a powerful Pakistani English novel that follows a sixteen-year-old Pakistani exchange student, Hira, as she navigates life in rural America amid severe illness and post-9/11 Islamophobia. The primary objective of this research is to explore how the protagonist's physical and metaphorical "fever" symbolizes the disorientation and hybrid identity formation experienced by young migrants caught between cultures. The study addresses the following research questions: How does illness function as a metaphor for cultural dislocation and belonging? In what ways does the novel challenge dominant Western representations of the Muslim migrant? And how can such narratives foster more equitable global dialogues on identity and cultural exchange? Despite growing interest in Pakistani Anglophone fiction, there remains a significant research gap in analyses that connect embodied experiences of illness with theories of hybridity and affective belonging in temporary migration narratives, particularly those centered on adolescent female voices. This qualitative literary study employs Homi K. Bhabha's concepts of hybridity, third space, and cultural ambivalence, combined with Sara Ahmed's theory of affective orientation and stranger encounters. Through close textual analysis, the research reveals how Hira's sick body disrupts binary cultural oppositions and creates new possibilities for belonging in the "third space." The findings suggest that *American Fever* offers a nuanced critique of both Pakistani familial expectations and American xenophobia, ultimately proposing a more inclusive model of global cultural identity. This paper contributes to postcolonial studies, migration and diaspora discourse, and gender studies by highlighting how contemporary Pakistani

literature enriches international conversations on identity, othering, and humanistic belonging in an increasingly polarized world.

Keywords: *Cultural hybridity, migration and diaspora, Pakistani English literature, embodied identity, third space*

Crisis of Expression in the Globalized World: The Impact of English Language Dominance on Identity in Pakistan

Memona Mujahid Affiliation: PhD Scholar at the Department of English, IIUI, Pakistan

ABSTRACT

Globalization has accelerated the dominance of English in non-native contexts, affecting local languages, cultures, and personal identities. Pakistan is one of the countries where the English language has proliferated beyond academia into various sociocultural contexts. The youth mostly prioritize English, thereby neglecting the cultural significance of Urdu and other native languages. The study hypothesizes that this phenomenon creates a crisis of expression wherein language users struggle to articulate complex thoughts, represent pure cultural identities, and express feelings and emotions clearly. Grounded in cosmopolitan and fluid linguistic identity theory (Varghese, Morgan, & Johnston, 2023) and the concept of adaptive linguistic repertoires (Li, 2023), this qualitative study investigates how Pakistani youth navigate English dominance and the decline of their mother tongue. Data has been collected through semi-structured interviews to examine expressive challenges, hybrid language practices, and identity negotiation. The study aims to highlight the interplay among global English, local languages, and self-expression, showing how partial language competence affects cultural belonging, emotional articulation, and self expression. Findings will contribute to sociolinguistic theory, offering insights into how linguistic globalization leads to a crisis of expression and identity. The study also has implications for informed educational practices that balance global language proficiency with the preservation of native languages.

Keywords: *Globalization, English dominance, mother tongue, crisis of expression, youth identity, multilingualism, adaptive linguistic repertoires, Pakistan*

The Postmaster As A Housewife In The Morning: A Post-Colonial Approach To The Selected Short Stories Of Rabindranath Tagore

Muhammad Naeem, Bacha Khan university charsadda

ABSTRACT

This research explores the sociocultural challenges portrayed in the selected short stories of Rabindranath Tagore, namely *The Postmaster*, *The Housewife*, and *The Morning*. The study investigates how Tagore artistically represents the complexities of colonial society, particularly the exploitative structures of colonial power that marginalized and oppressed the indigenous population for political, cultural, and economic gains. Through these narratives, Tagore presents the psychological and social consequences of colonial domination while simultaneously highlighting the emotional and cultural resilience of the natives. The research employs the theoretical framework of postcolonialism by drawing upon the seminal ideas of Edward Said, Gayatri Chakravorty Spivak, and Homi K. Bhabha. Said's concept of Orientalism is used to examine the binary opposition between the Orient and the Occident and the manner in which colonial discourse constructs the East as inferior and subordinate. Spivak's notion of Subalternity enables the study to analyze the silenced voices of the marginalized and the challenges faced by the oppressed indigenous communities. Furthermore, Bhabha's concepts of Ambivalence, Mimicry, Third Space, and Hybridity provide a deeper understanding of the cultural negotiations and identity crises emerging within colonial and postcolonial societies. Through a close textual analysis, this research reveals that Tagore's stories not only expose the hegemonic attitudes and hidden realities of colonial rule but also depict the evolving identities of colonized subjects caught between tradition and modernity. Ultimately, the study demonstrates how Tagore's fiction becomes a powerful critique

of colonial domination while simultaneously advocating cultural coexistence, human dignity, and the recovery of suppressed indigenous voices in postcolonial discourse.

Necropolitics And Race In The Poetry Of Suheir Hammad

Qaisar Waheed¹, Dr. Mumtaz Ahmad²

¹Department of English, Govt. Guru Nanak Graduate College, Nankana Sahib, Pakistan

²Department of English, Govt. M.A.O Graduate College, Lahore, Pakistan

ABSTRACT

The present research shows how the diasporic poetic voice of Suheir Hammad presents the geopolitical experiences of the Palestinians in the context of necropolitical and racialized power structures. Hammad converts political violence and racial discrimination against the Palestinians in a resisting poetic discourse that challenges the dominant global structures of power and privilege. Through the intersection of theoretical frameworks of necropolitics by Achille Mbembe (2019), and CRT by Derrick Bell (1992), the present research elucidates how Hammad's poetry functions as a theoretical and cultural mode of (en)countering racialization under the conditions where systematic violence and politics of death are practised. Furthermore, by applying Critical Race Theory to Hammad's poetry, the present research analyses how Palestinians' identity is distorted both in their own native land and globally by racialization. Hammad's poetry represents the diasporic experience, reconstructs Palestinian identity, and resists the dominant necropolitical and racialized power structures. It investigates how the diasporic voice of Hammad highlights the collective trauma and historical marginalization of the Palestinians at global canvas, shows solidarity with other racialized communities, and creates new possibilities of human existence and political resistance

Integration Of UN-Sustainable Development Goals (Sdgs) In English Language Teaching (ELT): A Global Agenda Of Critical Consciousness And Ecological Sensibility As A Voice Of Survival For The Future Generations

Nadia Nureen

ABSTRACT

The aim of this study is to uncover the integration of SDG 13 (Climate Action) in English Language Teaching (ELT) in secondary schools of Pakistan. It looks at how comprehension passages and classroom tasks can be integrated with climate change to improve students' language learning and environmental understanding and critical thinking skills. The study also explores the impact of climate-related teaching on the language learning, engagement, and knowledge of climate change of the learners in this study. The qualitative research approach was used, which comprised about 70 Grade 9 and 10 students from both the public and private secondary schools and their English language teachers. Comprehension-based classroom activities, written responses, classroom discussions and informal classroom interviews with students and teachers were used to collect data over 15 days. Data were analyzed through the lenses of Global Citizenship Education (GCE) in terms of cognitive, socio-emotional and behavioral learning domains using thematic analysis. Results show that SDG 13 integration in ELT had very positive effects on students' language competence, the awareness of environment, and the involvement of students in the classroom. The students were more critical and motivated about climate related issues and had greater sense of social responsibility. Some problems were however identified such as the rigid curriculum, exam-oriented teaching, limited teaching materials, inadequate teachers training and limited institutional support. The study findings indicate that incorporating the SDGs into the curriculum systematically is a key step towards turning ELT into an effective tool for fostering

sustainability and Global Citizenship Education in Pakistan. It also calls for teacher capacity building, and the application of learner-centered and climate-focused pedagogical resources and methods.

Algorithmic Femininity and Cyber Patriarchy in Pakistani Digital Marriage Culture: A Posthuman Feminist Reading of *How It Happened*

Rabia Ashraf, PhD scholar in The University of Faisalabad

ABSTRACT

The rapid expansion of digital communication technologies has significantly transformed the construction of gender, intimacy, and social identity in contemporary Pakistani society. While Pakistani feminist literary criticism has traditionally focused on patriarchy, nationalism, and postcolonial identity, limited scholarly attention has been given to the ways digital culture and algorithmic social practices reshape feminine subjectivity within urban middle-class environments. This paper addresses this emerging research gap through a posthuman feminist reading of *How It Happened* by Shazaf Fatima Haider. Drawing upon Posthuman Feminism, particularly the theoretical framework of Rosi Braidotti, the study investigates how digitally mediated *rishta* culture, WhatsApp communication, family surveillance, and performative femininity shape women's identities in contemporary Pakistani social life. The paper introduces the concept of "cyber patriarchy" to explain how patriarchal control has evolved into technologically mediated forms of monitoring, emotional regulation, and social evaluation through digital platforms. Rather than dismantling traditional structures of power, digital culture reproduces patriarchal expectations through online visibility, image-conscious social behavior, and algorithmically reinforced standards of beauty, obedience, and respectability. By contextualizing Pakistani women's fiction within global debates on posthumanism and digital humanities, this paper contributes a localized South Asian perspective to contemporary feminist theory. It further demonstrates how Pakistani Writing in English can generate indigenous theoretical models for understanding evolving forms of gendered identity in technologically mediated societies. The study ultimately argues that cyber patriarchy represents a new phase of patriarchal power operating through digital intimacy, virtual respectability politics, and algorithmic social expectations in contemporary Pakistan.

Cinematic Memories of Partition: Visualizing Trauma, Otherness, and Reconciliation in South Asian Cinema

Raheela Akhtar, Assistant Professor, Higher Education Department Punjab, Lahore

ABSTRACT

The Partition of India in 1947 remains an unresolved trauma whose reverberations continue to shape South Asian identities and intercommunal relations. This paper explores how Partition cinema engages with the politics of memory, trauma, and reconciliation through three films: Deepa Mehta's *Earth* (1947), Vijay Raaz's *Kya Dilli Kya Lahore*, and Sabiha Sumar's *Khamosh Pani*. Drawing upon Michael J. Shapiro's theory of the cinematic gaze and aesthetic politics, E. Ann Kaplan and Joshua Hirsch's trauma cinema, and Marianne Hirsch's concept of post memory, this study examines how filmmakers employ visual form—mise-en-scène, camera movement, sound design, and symbolic imagery to transform historical pain into acts of remembrance and critique. The analysis reveals how *Earth* visualizes communal violence through destabilized framing and sensory dissonance; how *Kya Dilli Kya Lahore* negotiates psychological othering within confined spaces; and how *Khamosh Pani* contrasts rural tranquility with gendered trauma and Islamization. Collectively, these films

challenge habitual viewing expectations and nationalist historiographies, reimagining Partition not as a closed event but as an ongoing affective and political process.

Sketching Dissent: Multimodal Humor and Nonviolent Resistance in Pakistani Comics

Sehrish Aslam, Lecturer, NUST/ Pakistan

ABSTRACT

This paper examines how contemporary Pakistani comics function as multimodal tools of cultural critique, representation, and non-violent resistance in sociopolitical contexts marked by censorship, inequality, and ideological contestation. Focusing on *Paasban – The Guardian* and *Team Muhafiz* — two digital and print comic series addressing social issues including governance failure, civic responsibility, gender norms, and public health — the study investigates how language and visual imagery converge to narrate dissent and negotiate power relations. These comics engage audiences through narrative, humour, and symbolic inversion, enabling reflection on structural contradictions without direct confrontation. Utilizing Systemic Functional Grammar (SFG) for verbal transitivity and Kress and van Leeuwen's visual grammar for representational analysis, the study identifies how material, behavioral, relational, and verbal processes encode both critique and agency. Material and behavioral processes foreground embodied action and collective engagement with social constraints, while relational and verbal processes articulate ideological tension, social expectations, and ethical positioning. For instance, *Paasban* employs ironic dialogue and juxtaposed imagery to expose contradictions in institutional authority, while *Team Muhafiz* frames collective action against societal harms through dynamic visual sequences and empowering verbal exchanges. The findings show that language and imagery in these comics do more than entertain: they constitute multimodal sites where power is contested, identities are constituted, and alternative narratives of resilience and civic engagement are articulated. By situating these texts within their socio-historical contexts, the paper contributes to global dialogues on representation and cultural identity, demonstrating how local narrative practices in Pakistan deploy multimodality to convey critique, resilience, and social transformation beyond traditional forms of protest.

Algorithmic Othering: Postcolonial Identity and Digital Erasure in Chimamanda Ngozi Adichie's *Americanah*

Sidra Shafi, Assistant Professor English, PhD Scholar, Lahore College for Women University Lahore

ABSTRACT

In the age of social media, algorithms do not merely reflect social hierarchies rather they actively construct, enforce, and naturalize them. This paper examines Chimamanda Ngozi Adichie's *Americanah* (2013) as a prescient literary site for interrogating the intersection of digital platforms, postcolonial identity, and racial othering in the twenty-first century diaspora experience. Through the novel's protagonist Ifemelu — a Nigerian immigrant blogger navigating race, belonging, and visibility in the United States ; Adichie dramatises what this study terms *algorithmic othering*: the process by which digital platforms systematically marginalise, stereotype, and render invisible the identities of postcolonial subjects. Drawing on Ruha Benjamin's (2019) concept of the New Jim Code — wherein racially discriminatory outcomes are encoded into ostensibly neutral

technological systems and Couldry and Mejias's (2019) data colonialism framework, this paper argues that Ifemelu's blogging practice functions as an act of digital self-inscription and an exposure of the structural limitations that digital platforms impose on Black and African diasporic voices. The novel reveals how recommendation algorithms, content moderation systems, and platform visibility logics replicate colonial hierarchies of representation, rewarding voices that conform to Western normative frameworks while suppressing those that challenge them. Methodologically, this study employs postcolonial literary analysis, reading Adichie's narrative both as fictional text and a cultural diagnosis of digital inequality. Close textual analysis of Ifemelu's blog posts within the novel is juxtaposed with Benjamin's and Couldry and Mejias's theoretical frameworks to illuminate how the politics of digital visibility are inseparable from the unresolved histories of colonial power. By reading Adichie through the lens of digital colonialism, the study contends that *Americanah* anticipates and illuminates a defining crisis of the digital age that the promise of universal connectivity conceals a deeper architecture of exclusion. It contributes to growing interdisciplinary conversations at the intersection of postcolonial literary studies, digital humanities, and the politics of identity in a hyperconnected yet unequal world.

Partition Trauma In Manto's Literature And Contemporary Art

Sonali & Sapna Research scholar Department of Painting Hewati Nandan Bahuguna Garhwal University,
Uttarakhand, India

ABSTRACT

One of the most traumatic events in Indian history was the 1947 partition, which led to displacement, violence, migration, and human suffering. It left a scar on the human mind and psychology; it deeply influenced the literature, visual art, and cinema. One of the most popular writers of undivided India was Saadat Hasan Manto, who consistently sought to reflect reality in his writing. He was born in 1912 in Ludhiana, Punjab. He also lived in Mumbai before Partition. After the Partition, he left India and moved to Lahore, Pakistan, and experienced the loss of his home and displacement from one land to another because of this historical event in India. He portrayed human tragedy and suffering in his short stories, including Toba Tek Singh, Khol Do, and others. Similarly, contemporary Indian artists reflect trauma, migration, displacement, human suffering, and women's pain through their visual representations. Artists like Arpita Singh reflect on female and female suffering through her paintings; Nalini Malani depicts women's suffering during Partition; and Manto's short story is reflected in a video installation, "Remembering Toba Tek Singh" Krishen Khanna explores migration, displacement, and refugees in his painting, all of which are narrated through short stories by Manto. This research paper analyzes Saadat Hasan Manto's Partition and Migration short stories and, in parallel to the same subject matter, in visual art representations by contemporary artists. The research study focuses on themes of psychological trauma, fragmented identity, gendered violence, and memory. The literary and visual representations of Manto's short story depict the same trauma, suffering, and migration. not focused on the political aspect of the 1947 partition, but depicted the human reality, identity, and deeply human experience of suffering during this historical event. This refers to the reflection and preservation of the harsh memory of the Partition through visual art and short stories.

The Discursive Construction of Fear in Western Digital News Media: A Critical Discourse Analysis of the 2026 U.S.–Iran War

Muhammad Farhat Abbas (PhD Scholar) & Sundas Rauf (PhD Scholar) COMSATS University Islamabad (Vehari) Campus

ABSTRACT

In contemporary media environments, fear has become a powerful discursive tool through which political conflicts and international crises are framed. Digital news media play a crucial role in shaping public perceptions by selecting specific lexical choices, narrative structures, and discursive strategies that emphasize danger, risk, and insecurity. This study investigates the discursive construction of fear in Western digital news media during the 2026 U.S.–Iran War through the lens of Critical Discourse Analysis (CDA). Drawing on Halliday's Systemic Functional Linguistics (SFL), particularly the transitivity system, the research analyzes selected headlines and news reports from major Western digital news platforms. The study examines how linguistic structures such as material processes, participant roles, and circumstantial elements are used to construct narratives of threat and instability. The analysis reveals that news discourse frequently employs action-oriented verbs, emotionally charged lexical items, and strategic foregrounding of actors and events to intensify perceptions of danger and conflict. Passive constructions are often used to highlight the consequences of violence, while active constructions emphasize the agency of powerful actors. These discursive patterns contribute to shaping public understanding of geopolitical conflicts by reinforcing narratives of fear and uncertainty. The study demonstrates that Western digital news media not only report war events but also participate in constructing ideological representations that influence public attitudes toward international conflicts. The findings contribute to the growing body of research in media discourse, political communication, and critical discourse studies by highlighting how fear is linguistically produced and circulated in digital news environments.

Keywords: *Critical Discourse Analysis, discourse of fear, digital news media, U.S.–Iran War 2026, transitivity analysis, media discourse*

Exploring Language, Power, and Representation through Theories of the Novel

Urvashi Jhajharia, Research Scholar, Banasthali Vidyapith

ABSTRACT

This paper explores the relationship between Language, Power, and Representation, drawing on the theoretical insights of M.M. Bakhtin, Georg Lukacs, Roland Barthes, Michel Foucault, Edward Said, and Gerard Genette who investigates the novel as a discursive space where competing voices, ideologies, and structure of authority intersect. The paper begins with Bakhtin's concept of dialogism and heteroglossia, which conceptualizes the novel as a site of multiple social languages and ideological contestation. Lukacs' theory of realism is then explored to understand how novel reflect historical consciousness and class relations. Barthes' notion of the 'writerly text' challenges fixed meanings and emphasises the active role of readers in constructing representation. Foucault's theories of discourse and power reveal how language produces and regulates knowledge, subjectivity, and institutional authority within narrative structures. Said's postcolonial perspective demonstrates how novels participate in constructing cultural identities and reinforcing or resisting imperial ideologies. Finally, Gerard Genette, who examines narrative theory and how it shapes, informs, construct meaning in the novel and coax the readers. The paper provides a critical framework for understanding that narrative is not merely a formal mechanism of storytelling but a powerful medium through which language produces authority, negotiates social and cultural power, and represents identities, histories, and lived experiences. By integrating narrative theory with border concerns in literary and cultural studies, this study highlights the enduring relevance of the novel in addressing issues of identity, culture, and social discourse, and underscores the significance of theories of the novel in the contemporary humanities scholarship.

The Posthuman Child: Algorithmic Regimes and the Techno-Social Environment in Klara and the Sun

Mr. Zakria

ABSTRACT

Kazuo Ishiguro's *Klara and the Sun* is a contemporary dystopian fiction that probes into the question of selfhood and AI vulnerability. The paper addresses this by drawing on concepts from Wendy Hui Kyong Chun's programmed visions and Rosi Braidotti's posthumanism. Childhood is not stable in the contextual world of the novel but is conditioned through algorithmic systems and techno-social settings. The paper displays the severity of the network-based surveillance and optimization to control both humans and machines. If the "children lifted up" are the biopolitically reconstituted humans, embedded in biological and non-biological sign systems as an effect of technological totalization in favourable social stratification, Klara's observational consciousness is that of Chun's claim about late modern digital production: associative forms of habitual control that imprint into their participants as experientially self-evident and out of sight. Continuing, the article argues that the book's child character functions as a posthuman subjectivity, whose individuality emerges on account of human, technical, and environmental assemblages. I argue that the children, especially Klara and Josie, and Rick serve posthuman identities and liberal-humanist presumptions about autonomy and exceptionalism, which are undermined by vulnerability, dependency, and affect. The paper assesses how manufactured bodies and commodified intimacy point to the dissolution of boundaries between human subjectivity and machine cognition. By situating childhood in posthuman and computational contexts, this study contributes to current debates about artificial intelligence, digital governance, and the nature of human agency in contemporary speculative fiction.

The Importance of Visual Aids in Teaching English at the Primary Level in Pakistan

Qurra-Tul-Ain, independent scholar and Researcher

Abstract

Teaching English using visual aids at the primary level is one of the most innovative teaching approaches. This study was intended to determine the importance and impact of using visual aids for teaching English to primary-level students in Islamabad and Rawalpindi (twin cities). This study investigated teachers' views on visual aids in twin city schools. The study examined the effectiveness of visual aids in primary education. In this study, a quantitative research design was employed. This study used an experimental study with a control group to achieve the objectives. This research used a survey as a tool to collect quantitative data. RCT was utilized to find out whether there was any difference in the level of learning of students. Teachers and students of the primary level in the twin cities were the prime focus of the study. 150 primary level students and 40 teachers teaching English constituted the population of the study. A combination of random and purposive sampling was used. Data were analyzed using SPSS v 22.0. Paired sample t-test was applied to test the hypothesis of this study. This study tested the hypothesis that "using visual aids has a positive effect on student academic achievement". The findings show that most primary English teachers favor using visual aids. The findings revealed that teaching English with the use of visual aids is a more effective teaching method than teaching without the use of visual aids. The experimental and control groups performed differently in this study. A significant difference has been observed in the learning between the scores of post-tests of teaching without visual aids and teaching with visual aids. Hence, the students learn better through the use of teaching with visuals as an instructional approach. This study has proved that teaching with visual aids helps the students to learn better. It was found that the use of visuals benefits students' English language learning. This project found that teaching with the use of visuals is more effective than the non-visual method. The results of this research might provide a guideline for the curriculum designers, educational administrators, teachers, and educators to incorporate teaching English with visual aids as an effective instructional method for the effective development of primary level students. This study recommends that types of research may be carried

out among the different age groups in all schools in Pakistan addressing different facets of teaching English with the use of visual aids. Teacher training programs should be organized in public schools to train teachers on how to teach English utilizing visuals.

Beyond Borders: Afghan Migration, Diaspora Identity, Gender, and Reintegration between Pakistan and Afghanistan

Maria Kokab, Development Practitioner

Abstract

The migration of Afghans to Pakistan over the past four decades represents one of the longest and most significant displacement experiences in South Asia. Driven by conflict, political instability, economic hardship, and humanitarian crises, successive waves of migration have shaped both Afghan communities and Pakistani society. This paper examines the interconnected processes of migration, diaspora formation, identity construction, and reintegration among Afghan refugees and returnees. Drawing on diaspora and transnationalism theories, it explores how Afghans maintain cultural ties to their homeland while adapting to life in Pakistan, creating hybrid identities that reflect experiences across borders.

The paper also highlights the gendered dimensions of migration and reintegration, emphasizing how displacement affects access to education, livelihoods, healthcare, and social participation. Particular attention is given to the experiences of women and youth, who face unique challenges as well as opportunities for empowerment and resilience. By examining migration and return as continuous and interconnected processes, the study demonstrates how Afghan refugees and returnees contribute to cultural exchange, social cohesion, and regional dialogue between Pakistan and Afghanistan.
